

XR Showcase

The XR Showcase is a turnkey Mixed Reality system for rent. Its core technology, GLoD, streams even very large 3D models straight to standalone XR headsets. No render farm, no IT project. Present, train, and collaborate across locations in a shared spatial context. It scales from small groups to large audiences and the hardware fits in your carry-on: show up, unpack, start. Once your data is in our system (Starter Package), the Showcase is available in several sizes, ready to use: from €1,500/month (size S), plus handling and transport.

XR Showcase S

XR Showcase M

XR Showcase L

Rental sizes at a glance

S

2× Meta Quest 3
with XRoperaStick
+ XRpole, power
banks

M

like S, plus tablet or
laptop and router

L

4× Meta Quest 3,
4K projector +
screen, mini PC,
tablet, router

XL

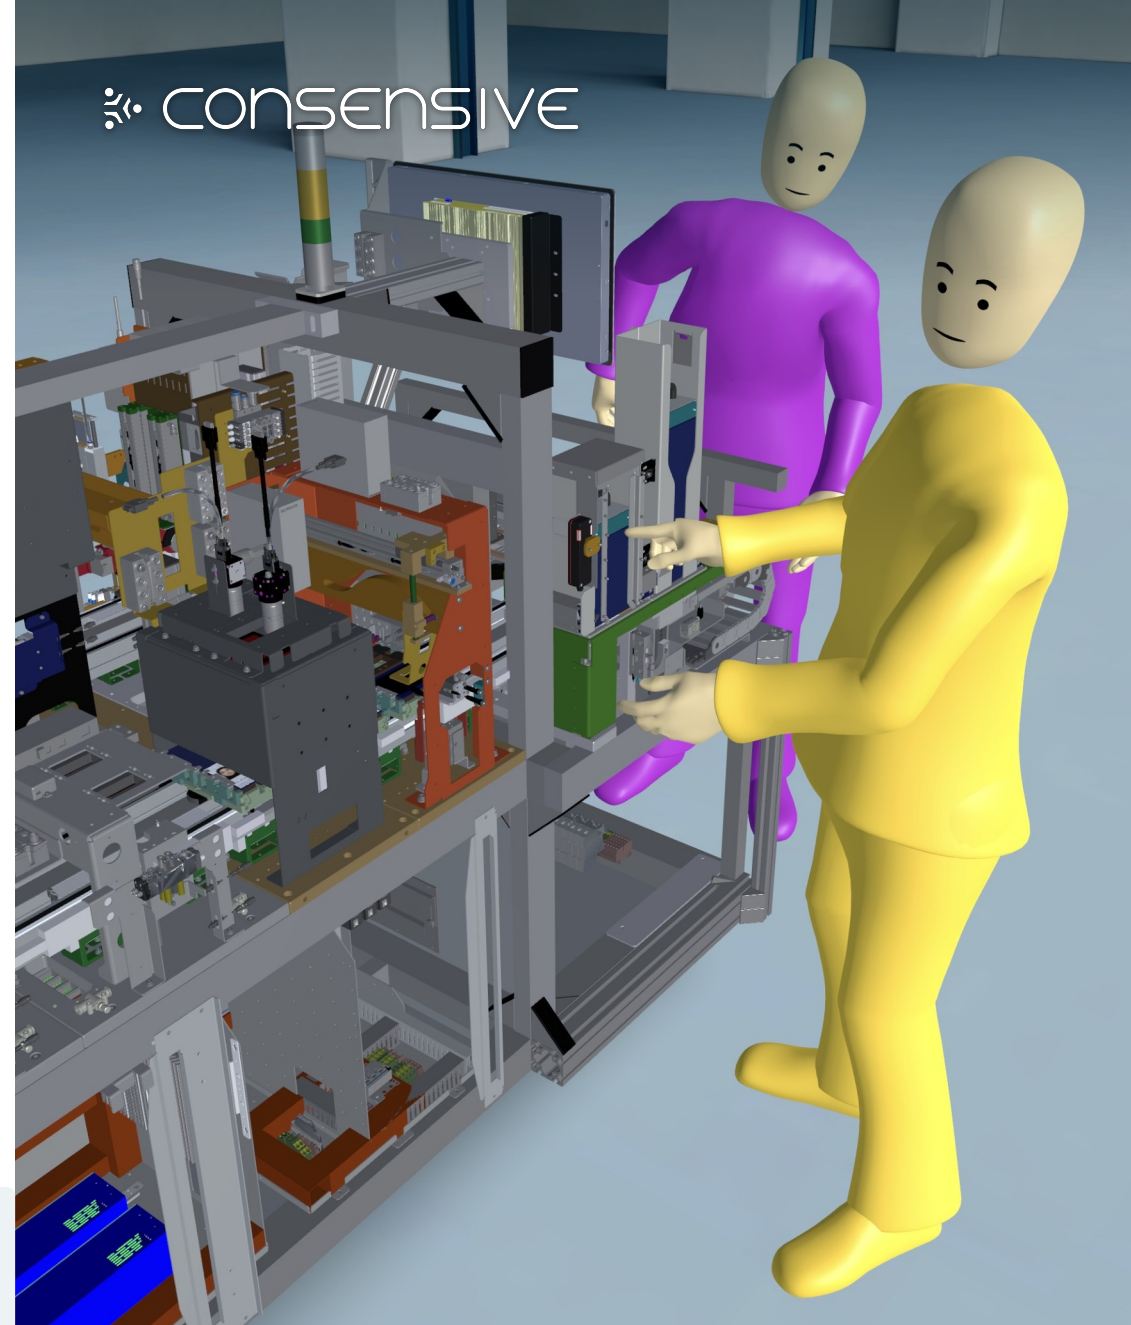

like L with 10×
instead of 4×
Meta Quest 3

Starter Package

See what Consensive can do for your business, with your own data: includes 3 months of XR Showcase M, content integration and consulting. From €9,500 (one-time). Request your Starter Package or book an online demo: consensive.com/use-cases

All prices exclude VAT.

Social XR for Industry

Your products at full scale, wherever your team is.

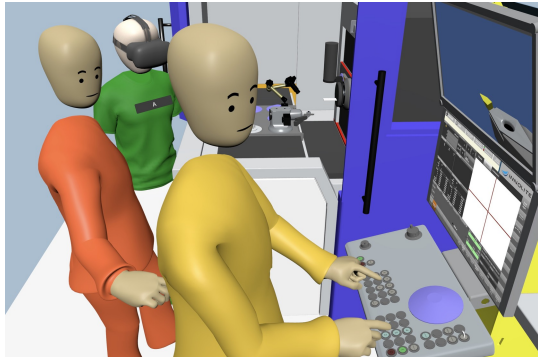

Presentation

Meet prospects in an immersive showroom and walk through every detail, without shipping the real product. On-site or from another location, everyone shares the same context.

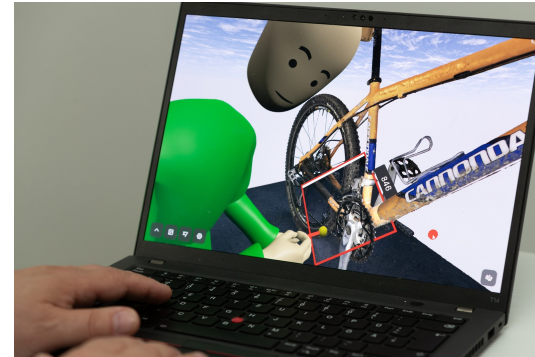

Evaluation and Participation

Bring people into a plan and let them weigh in. In Weimar's Bauhaus Participation Lab, residents compare variants for urban developments on a big screen, on tablets and in VR at once.

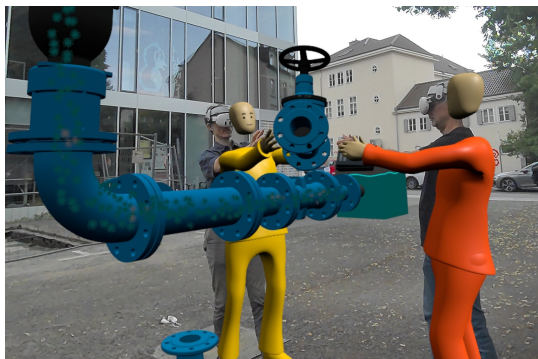

Cooperative Training

Train complex procedures on interactive machine models, together and risk-free. People practice as often as they need, with no downtime on real equipment and no travel.

Documentation and Analysis

Compare 3D reconstructions across times and verify against original photos. Be it critical infrastructure or machine maintenance, experts review the shared models and flag details.

Design and Exploration

Build and change a design together in real time, then watch it behave. With our Pipeworks Editor, trainees assemble pipe systems by hand and see the water flow respond as they go.

Experience and Education

Let groups experience culture and history together, on-site and across locations. At the Goethe National Museum in Weimar, visitors explore the rooms of the digital model: together, playful and immersive.
